

A background image of a warehouse filled with tall metal shelving units. The shelves are stocked with various industrial components, including large valves and pipes. The perspective is from an aisle, looking down the length of the warehouse. The image is slightly faded to allow the text to stand out.

# ABZ Precision Built Butterfly Valves

## Resil-O-Seat™ Seated Valves for Chemical and Abrasion Resistance Applications.

The figures 909/919 provide excellent flow characteristics with the thin profile of their one-piece disc/stem. Various materials are available for a wide selection of applications.

**1** Bodies are machined to high tolerances. Guaranteed standard dimensions for interchangeability of parts and operators.

**2** Top bushings protect the stem from side thrust of operators. They are made of impact and corrosion resistant materials.

**3** Special double V-shape of stem seal self-adjusts to protect the stem area for either vacuum or pressure use.

**4** Two-piece body and one-piece disc/stem makes field replacement of seat and disc/stem quick and easy.

**5** The special snap-in Resil-O-Seat™ design fixes seat in place without bonding. The Resil-O-Seat™ is 100% field replaceable - no special tools required.

**6** The ABZ Ring Seal on the Teflon® seat is a molded part of the seat. It is of special design so as to contain an o-ring creating a positive seal around the stem as well as between the seat and valve body. This positive secondary seal eliminates leakage into the stem journal as well as migration of line media behind the seat. Teflon® ring seals are located at top and bottom on all Teflon® seated valves.

**7** Stem and body are isolated from line media by the interference fit of the primary seal created between the disc and seat.

**8** Specially designed disc/stem prevents distortion of disc under high pressure. Thin disc allows for maximum open flow.

**9** Disc edge is individually processed through machining for a smooth edge, providing a bubble tight shut-off and maximum seat life.

**10** Resil-O-Seat™ forms a seal against all standard ANSI 125/150 flanges. Gasketing requirements are eliminated.

**909** is a wafer style body  
**919** is a full lug style body

## FIGURES 909/919

# Valve Dimensions

All standard seats are Food Grade with the exception of Viton

Valve Size	DIMENSIONS									TOP PLATE DRILLING			FIG. 919 TAPPED LUG DATA			WEIGHT (POUNDS)

\*Not available with Teflon® disc.

## NOTES:

1. Dimension "K" not applicable to 10" or 12" size. The 10" and 12" stem is round with 1/4" Key.
2. The figures 909 and 919 cannot be used on pipe or flange with an inside diameter less than "E" dimension.
3. Valves are rated up to 150 PSI bi-directional service and 75 PSI end of line rating. Undercut disc is rated up to 50 PSI bi-directional service and 25 PSI end of line rating. Teflon® covered disc rated to 150 PSI bi-directional service, 75 PSI end of line rating and not available in undercut. Teflon® seats and are not available with an undercut disc. 1.5" valve not available in lug body, with Teflon® or undercut disc.
4. Designed in accordance with sections of API 609 Category A, ASME 16.1/16.5, ASME 16.34 and MSS SP67. Design tested in accordance with API 598.
5. Compatible with ANSI Class 125/150 flange standards.

## STANDARD CONSTRUCTION SPECIFICATIONS:

**Body:** Cast Iron, 316 Stainless Steel and Aluminum (Wafer)

**Disc/Stem:** 316 Stainless Steel, 17-4 Stainless Steel, and 17-4 Stainless Steel / Teflon® covered Disc

**Resilient Seat:** Teflon®. Seats with EPDM, Buna or Viton backing material. EPDM, Buna-N, Viton

**Stem Bushing:** Teflon® – Graphite Impregnated

**Stem Packing:** Buna-N and Viton

*Additional materials are available for a wide selection of applications.*

Sized for stainless disc, does not cover encapsulated disc trims.

Cv is defined as the volume of water in U.S.G.P.M. that will flow through a given restriction or valve opening with a pressure drop of one (1) p.s.i. at room temperature. Recommended control angles are between 20°-70° open.
