Ville Platte, LA

Cameron's Valves & Measurement (V&M) group is a leading provider of valves and measurement systems to the oil and gas industry. The group's products are primarily used to control, direct and measure the flow of oil and gas as it is moved from individual wellheads through flow lines, gathering lines and transmission systems to refineries, petrochemical plants and industrial centers for processing.

The Engineered & Process Valves division provides a wide range of valves for use in natural gas, LNG, crude oil and refined products transmission lines. The traditional CAMERON® fully-welded ball valve product line has been combined with the GROVE®, RING-O®, TOM WHEATLEY®, ENTECH™ and TK® product lines. This broad offering has significantly strengthened Cameron's ability to serve as a single source for a wide scope of customer requirements. The division also provides critical service valves for refinery, chemical and petrochemical processing businesses and for associated storage terminal applications, particularly through the ORBIT® and GENERAL VALVE®. These brands are complimented by WKM® and TBV™ valve products and considerably expand the scope of this division's product offerings.

The WKM brand is recognized throughout the world for durable, reliable and flexible valves built for many challenging situations. WKM Pow-R-Seal Gate Valves are the choice of liquids pipeline operators because they tolerate the wax, paraffin, abrasives and multi-product flow that causes problems in other valve designs.

WKM® POW-R-SEAL® API 6D THROUGH CONDUIT GATE VALVES

DESIGN

The WKM Pow-R-Seal valve's through-conduit design provides these specific advantages resulting in reliable performance and long life:

6 in. - 12 in. (150 mm - 300 mm)
Pow-R-Seal Valve

- **Protection of seat faces.** Seat faces are outside the flow stream and in full contact with the gate, in both fully open and fully closed positions. Seat life is thus greatly extended.
- **Smooth, continuous conduit for flow.** Destructive turbulence is eliminated. In a full-bore valve, pressure drop through the valve is no greater than that through an equal length of equal-diameter pipe.
- **Block and bleed capability.** The Pow-R-Seal valve in closed position forms a tight mechanical seal on both seats simultaneously, which allows the body cavity to be bled.

For specific applications, please consult factory.

TIGHT MECHANICAL SEAL

The WKM Pow-R-Seal's parallel expanding gate design provides a tight mechanical seal, upstream and downstream simultaneously, which is normally unaffected by pressure variations or vibration. (See Operation, following page.) In the valve illustrated, for service at temperatures from -20°F to +300°F (-29°C to +148°C), the seal is both TFE-to-metal and metal-to-metal.

WKM® POW-R-SEAL® API 6D THROUGH CONDUIT GATE VALVES

FOR HIGH-TEMPERATURE SERVICE UP TO 1000°F (538°C)

This WKM Pow-R-Seal valve can handle fluids, gases, steam and hot water at temperatures up to 1000°F (538°C). The valve has the following features which put it in a class by itself for such critical service:

- **Metal-to-metal, mechanical seal** – no elastomers. Valve does not depend on line pressure to shut off. Seal is normally unaffected by pressure surges, vibration, or heat.
- **Adjustable outside packing gland** – proved best for extremely hot service.
- **Metal-to-metal bonnet seal** – the bolted bonnet design used on 6 inch and larger valves and bolted bonnet design used on 4 inch and smaller valves provide metal-to-metal, tight bonnet seals in high temperature applications.
- **Protected seat faces**, a function of the valve's through-conduit design. Seat faces are outside the flow stream and in full contact with the gate, whether the valve is open or closed. Seats last longer and shut-off tight.
- **Smooth, continuous conduit** for flow. No turbulence. In full bore valves, pressure drop is no greater than through an equal length of equal diameter pipe.
- **Rising stem design** – puts stem threads outside the critical heat area.

WKM® POW-R-SEAL® API 6D THROUGH CONDUIT GATE VALVES

OPERATING PRINCIPLES

The WKM Pow-R-Seal gate valve is a premium through conduit expanding gate valve. The parallel expanding gate design provides a tight mechanical seal which is normally unaffected by pressure variations. Each seat contains a plastic face seal. The seats are press fit into the body to affect a metal-to-metal body-seat seal. A non-metallic seat rear seal is also provided. All metal seats are available for special trims.

The full bore design has the same pressure drop as an equivalent length of pipe and allows passage of all types of scrapers (pigs).

The body center section is cast as a single piece to provide the necessary strength to resist pipeline bending moments.

The gate-segment assembly consists of: gate, segment and gate centralizer (two assemblies). The gate-segment assembly is smaller than the space between the seats allowing free movement in the mid-travel position.

In the CLOSED position, the segment stops moving when it contacts the stop. Continued stem movement causes the gate to slide down the top angles, expanding the gate-segment outward against both seats. In the OPEN position, the segment stops moving when it contacts the stop.

Continued stem movement causes the gate to slide up the bottom angles, again expanding the gate-segment against both seats. Flow is isolated from the valve body. The gate centralizer allows the gate-segment to move freely and wedge only in the full open or full closed position.

WKM Pow-R-Seal valves do not depend on lubrication for a seal in normal operation. However, lubricants / sealants can be injected to promote smooth operation*. Seat sealants can also be injected to affect a seal in an emergency should the seats become damaged due to foreign matter.

The stem is sealed by the SLS system. This seal is hydrocarbon fugitive emissions tested and has demonstrated seal-ability not to exceed 500 ppm leakage. It consists of a single Spring Loaded Lip seal, a lantern ring, a chevron ring and appropriate adapters. The Single Spring Loaded Lip seal contains four (4) separated sealing bands

to promote reliability. The stem seal is completely contained in the bonnet. The stem is centered by bushings and the lower pedestal acts as a stem scraper. The seal works without a plastic injectable. In an emergency, plastic packing can be injected into the packing box to affect a temporary seal while the valve is under pressure.

The bonnet seal is made by a flat metal gasket in the 6 in. - 12 in. (150 mm - 300 mm) size range.

Bonnet seals for sizes 14 in. - 24 in. (350 mm - 600 mm) are made with an O-ring seal. High temperature valves use a spiral wound metal gasket with a non-asbestos filler.

WKM Pow-R-Seal valves are repairable in-line.

WKM Pow-R-Seal gate valves meet the requirements of API 6D.

The valve stroke is established by manufacturing tolerances and cannot get out of adjustment.

WKM Pow-R-Seal gate valves are available with hand wheel operators (some sizes), bevel gear operators, or less gearing (bare stem). Electric motor operators from a variety of suppliers can be offered.

Operator mounting is simplified as yoke tube upper flanges are in compliance with MSS-SP-102. Yoke tube flanges in compliance with ISO 5210 are available.

WKM Pow-R-Seal gate valves are supplied with indicators as a standard for Handwheel and Bevel Gear Operated valves. Handwheel Operated valves have marks on the indicator rods which show when the valve is in the full open or closed position.

WKM Pow-R-Seal gate valves are available with Lubrication / Packing / Drain extensions.

WKM Pow-R-Seal gate valves are also available with Stem / Yoke tube extensions.

WKM Pow-R-Seal gate valves are available with a variety of coatings including Coal Tar Epoxy for buried service, 2-3 part coating systems for marine environments, Inorganic Zinc Rich Epoxy, etc.

* Some high temperature valves do not have the seat injection feature.

WKM® POW-R-SEAL® API 6D THROUGH CONDUIT GATE VALVES

OPERATION

WKM Pow-R-Seal is the ultimate choice for full port, through conduit, positive shut-off gate valves.

60 years of worldwide service in oil, gas, chemicals, water, slurry and multi-products has confirmed the WKM Pow-R-Seal as the most trusted gate valve, where safety and reliability of sealing are critical.

The parallel expanding gate design provides a tight mechanical seal which is normally unaffected by vibrations or pressure variations.

The rigid, cast steel body resists pipeline bending moments, which could affect seat sealing in other valves.

PTFE seals on both faces of the valve assure drop tight sealing, while metal-metal contact between the seals and gate mechanism provides tight shut-off.

All-metal seals are also available for service to 1000°F (538°C), where leakage rates comply with API 6D / ISO 5208.

SEALED CLOSED

In the fully CLOSED position the segment has engaged with an end-stop and the gate is wedged downward, expanding the segment and gate so that they form a tight mechanical closure against the upstream and downstream seats. Venting the body cavity will provide total, tight shut-off.

MID-TRAVEL

During travel towards OPEN, the gate slides across the wedge angle of the segment, collapsing the assembly so that it travels freely between the seal faces. The patented Leverlock® gate centralizer holds the mechanism in the neutral position until seal expansion is required.

FULLY OPEN

When the bore in the segment is aligned with the conduit bore, an end-stop prevents further travel and the gate slides across the wedge angle, expanding the gate and the segment, isolating the flow from the body. The preferred flow direction assures easier operation.

LEVERLOCK MECHANISM

The lever arm is held parallel to the gate faces by the skirt plates, while the assembly is moving through its stroke. Near end-of-travel, the skirt allows the lever to tilt. The gate and segment slide against their angled faces, creating the expanding seal action. In their final position, the gate and segment are mechanically secured in place. The skirt plates are guide rails, at the sides of the gate. The skirts align the gate and segments with the seats.

WKM® POW-R-SEAL® API 6D THROUGH CONDUIT GATE VALVES

FEATURES

Through Conduit Design: Smooth Bore, Minimum Pressure Drop, Protected Seat Faces

The WKM Pow-R-Seal valve's smooth, continuous bore minimizes turbulence. In full bore valves pressure drop is no more than through an equal length of the same size pipe. Seat faces are outside the flow stream and thus protected from contact with the lading whether the valve is open or closed.

The WKM Pow-R-Seal's full round bore makes it possible to run pigs, scrapers or hot tap cutters through the valves without danger of damaging the valve, lodging the scraper, or jamming it with metal cutting.

On-Line Overhaul

WKM Pow-R-Seal valves can be overhauled right on the line. Gate, seats and other internal parts can be removed and replaced by a trained serviceman without excessive shutdown time.

Double-Sealing Replaceable Seats

Seats can be removed and replaced while the valve is in the line. Seats are provided with PTFE inserts and thus affect a double seal – an initial TFE-to-metal seal in addition to a metal-to-metal seal – both upstream and downstream.

This feature does not apply to high temperature valves.

Gate Centralizer

WKM Pow-R-Seals of 6 in. and larger sizes feature the leverlock gate centralizer which retains the gate-segment assembly in a neutral position during opening and closing travel but permits expansion of the assembly at the proper moment for seating, in open or closed position.

Gate and Segment/Stems

WKM Pow-R-Seal gates and stems are Nickel Plated. HF-6 overlay is available on request for the gate / segment and seat sealing surfaces.

Extensions

For valves which are to be buried, operated from a catwalk, or otherwise difficult to reach, stem and body fitting extensions can be supplied in virtually any desired length in 6 in. increments from the minimum extension length that can be furnished. Extensions come as original equipment or can be field-installed on valves already in service.

WKM® POW-R-SEAL® API 6D THROUGH CONDUIT GATE VALVES

THERMAL RELIEF SYSTEM

Operations

Because of the split gate design, it is possible for excess body pressure to develop in the body cavities of closed valves. This usually results from heating in the valves in liquid service. A thermal body cavity relief system is provided to relieve this excess body pressure. Thermal relief systems which direct excess body pressure to the upstream conduit are standard. This system consists of two (2) needle valves, a check valve, tubing and two (2) fittings.

Body pressure greater than the segment conduit pressure causes the check valve to unseat and relieve excess pressure to the upstream conduit. The needle valve must be kept open while the valve is in service. These needle valves can be used to isolate the line pressure to service the relief system, as needed. This illustrates the standard body relief system. Custom body relief systems may be available at extra cost.

TYPICAL THERMAL BODY CAVITY RELIEF ARRANGEMENT

ITEM	PART	QTY

WKM® POW-R-SEAL® API 6D THROUGH CONDUIT GATE VALVES

SUMMARY OF WKM MODEL E-1C POW-R-SEAL GATE VALVE FEATURES

1. THROUGH CONDUIT PARALLEL EXPANDING GATE VALVE

- a Provides a tight mechanically activated seal.
- b Full bore design minimizes pressure drop and allows passage of all types of scrapers (pigs).

2. FUGITIVE EMISSIONS TESTED SLS STEM SEAL*

- a Stem Seal is completely contained in the bonnet.
- b Stem is centralized by bearings.
- c Fugitive emissions tested.
- d Seal is self adjusting and does not depend on plastic packing.
- e PTFE compound resists virtually all ladings.
- f Pedestal supports the seal and acts as a stem scraper.
- g 6 in. - 24 in. (150 mm - 600 mm) 300-900 Class valves are fire tested to API 6FA (3rd Edition).

3. INTERFERENCE FIT SEATS

- a Block and Bleed per API 6D
- b Simple design is resistant to dirty service.
- c Insert initiates the seal and helps clean the gate.**
- d Seats are compatible with virtually all ladings.
- e Seats may be lubricated to promote long life, minimize operating torques, or effect a seal in an emergency.
- f 6 in. - 12 in. (150 mm - 300 mm) 300-900 Class valves are fire tested to API 6FA (3rd Edition).
- g 14 in. - 24 in. (350 mm - 600 mm) 600-900 Class valves are fire tested to API 6FA (3rd Edition).

4. BOLTED BONNET-VALVE IS IN-LINE REPAIRABLE

Bonnet seal resists virtually all ladings.

5. YOKE TUBE UPPER FLANGE CONFORMS TO ISO 5210

(6 in. - 12 in. (150 mm - 300 mm) 300 - 900) and MSS-SP-102

Simplifies operator mounting.

WKM® POW-R-SEAL® API 6D THROUGH CONDUIT GATE VALVES

SUMMARY OF WKM MODEL E-1C POW-R-SEAL GATE VALVE FEATURES (Cont.)

6. SINGLE PIECE CAST BODY CENTER SECTION

- a Provides the necessary strength to resist pipeline bending.
- b Smooth shape minimizes stress concentrations.
- c Made from pressure vessel quality steel.

7. VALVE STROKE IS ESTABLISHED BY MANUFACTURING TOLERANCES

Cannot get out of adjustment.

8. VALVES AVAILABLE WITH HAND WHEEL OPERATORS*, BEVEL GEAR OPERATORS, OR LESS GEARING (BARE STEM)**

Also available with electric motor operators from a variety of suppliers.

9. SEVERAL TYPES OF BODY CAVITY THERMAL RELIEF SYSTEMS ARE AVAILABLE

10. LUBE, PACKING AND DRAIN EXTENSIONS ARE AVAILABLE

11. STEM / YOKE EXTENSIONS ARE AVAILABLE

12. VARIETY OF AVAILABLE PAINTS / COATINGS

* Does not apply to high temperature valves.

** High Temperature valves do not have the insert.

*** 6 in. (150 mm) through 10 in. (250 mm) 300-900 Class and 12 in. (300 mm) 300-600 Class only in selected sizes.

* 12 in. (300 mm) 300 Class valves have 400 class End-to-End dimensions.

WKM® POW-R-SEAL® API 6D THROUGH CONDUIT GATE VALVES

BEVEL GEAR OPERATED

14 in. - 24 in. (350 mm - 600 mm)

MAX. WP @ 100°F

Class 300: 750 psi CWP
1125 psi Test

Class 600: 1500 psi CWP
2250 psi Test

Class 900: 2250 psi CWP
3375 psi Test

Principal Dimensions

N = Number of turns of Handwheel or Bevel Gear Operator
Handwheel to fully open or close valve.

NOTE: 1. Use RECOMMENDED OPERATING THRUST and TORQUES for sizing bevel gear operators.
2. Use BLOCK & BLEED THRUSTS and TORQUES for sizing Power operators (Electric, gas, hydraulic, etc.).
3. MAXIMUM OPERATING THRUST and TORQUES are the maximum allowable for the valve.

WKM® POW-R-SEAL® API 6D THROUGH CONDUIT GATE VALVES

OPERATOR INTERFACE DIMENSIONS TOPWORKS DATA

Operator Interface comply with ISO 5210 (6 in. to 12 in. (150 mm to 300 mm) only) and MSS-SP-102.

An adapter ring is provided on 6 in. to 12 in. (150 mm to 300 mm) bare stem/less gearing valves to comply with ISO 5210 or MSS-SP-102.

See page 18 for Operator Interface Dimensions.

Use the 400 Class K_v .

WKM® POW-R-SEAL® API 6D THROUGH CONDUIT GATE VALVES

PARTIAL OPEN FLOW CHARACTERISTICS

The following graph approximates Flow Coefficient (C_v or K_v) of gate valves as a function of the valve stroke going from CLOSED to OPEN. Note that this is an estimation only because of assumptions made in the valve stroke as well as unpredictable flow characteristics around the gate-seat bore in the partially open position.

Gate valves are intended for on-off service. Intermittent throttling such as pressure equalization service is acceptable. Continuous throttling is not recommended. This information is provided only to facilitate the engineering of systems in the transition between open and closed positions of the valves. One example might be to evaluate the possibility of water hammer in liquid pipelines.

Partial Open Flow Characteristics (Through Conduit Gate Valves)

WKM® POW-R-SEAL® API 6D THROUGH CONDUIT GATE VALVES

WKM® POW-R-SEAL® API 6D THROUGH CONDUIT GATE VALVES

TRIMS

T-10 WATERFLOOD (UNINHIBITED)

Carbon steel body/bonnet with wetted surface, ENP plated, internal parts of corrosive resistant materials.
Temperature ratings: -20°F to +250°F (-29°C to +121°C).

T-11 MODEL M - 2 inch, 3 inch, 4 inch, ASME CLASS 600 -1500 STANDARD TRIM

For non-corrosive aromatic service with concentration of MTBE to 100 percent.

Temperature rating: -20°F to +250°F (-29°C to +121°C).

T-24 SOUR GAS AND OIL (NACE MR0175)

Primarily for sour gas and oil (NACE MR0175) where resistance to hydrogen sulfide embrittlement is required. Also suitable for other chemicals, products or hydrocarbons when H₂S is present. May be used when CO₂ is present in smaller amounts than H₂S. Temperature ratings: -20°F to +250°F (-29°C to +121°C).

T-30 High TEMPERATURE -20°F TO +650°F (-29°C TO 343°C)

For higher temperature service where the corrosion resistance and wire drawing resistance of the stainless internals with stellite overlay are suitable. The limiting temperature is a function of the body material which follows the appropriate pressure rating table. (Ref. ASME Std. B16.34, 1977).

The temperature limitations are -20°F to +650°F (-29°C to +343°C).

T-31 High TEMPERATURE - UP TO +1000°F (+538°C)

For service above 550°F (288°C). Has same qualifications as T-30, except metal-to-metal seating only is required for temperatures from +650°F to +1000°F (+343°C to +538°C).

T-36 LOW TEMPERATURE - 50°F (-46°C) NACE

For essentially non-corrosive ladings, either liquid or gaseous.

The pressure retaining components (body, bonnet and bolting) are of impact tested materials.

Temperature ratings: -50°F to +250°F (-46°C to +121°C).

T-37 LOW TEMPERATURE SOUR -50°F (-46°C) NACE

Primarily for sour gas and oil (NACE MR0175) where resistance to hydrogen sulfide embrittlement is required at -50°F (-46°C) service.

The pressure retaining components (body, bonnet and bolting) are of impact tested materials.

Also suitable for other chemicals, products or hydrocarbons when H₂S is present. May be used when CO₂ is present in smaller amounts than H₂S. Temperature ratings: -50°F to +250°F (-46°C to +121°C).

T-101 AROMATIC SERVICE 6 in. - 24 in. 300 - 1500

For non-corrosive aromatic service with concentration of MTBE, Ethanol, Methanol to 40 percent.
Temperature ratings: -20°F to +250°F (-29°C to +121°C).

T-102 HIGH AROMATIC (Special Services) 6 in. - 24 in. 300 - 1500

For non-corrosive aromatic service with concentration of MTBE, Ethanol, Methanol to 100 percent.
Temperature rating: -20°F to +250°F (-29°C to +121°C).

Other Trims Available on Request.

CAMSERV™ AFTERMARKET SERVICES

Cameron's Aftermarket Services' goal is to help our customers lower the total cost of valve ownership. To that end we offer a full range of services from over twenty-five Service Centers worldwide and can provide experienced personnel trained to meet the specific service requirements of each valve type.

Aftermarket Services

- Supplies replacement valves and parts:
 - Maintains a full inventory of new and reconditioned valves for immediate delivery
 - Provides factory warranty support for all Cameron OEM brands as well as service for most other valves
- Field Service & Technical Support
 - Field service technicians on call 24 hours a day 7 days a week to handle service issues wherever they arise
 - Provides equipment installation, field repairs, as well as track and perform scheduled maintenance
- Customer Property Repair
 - The Customer Property Repair program allows Cameron valve customers to store assets at our service centers throughout the world
 - Valves tracked in electronic database accessible through the Internet
- Remanufactured Products
 - Offers a broad range of API-compliant reconditioned equipment with fast delivery
- Total Valve Management
 - Supply and service automation and control packages
 - Assist with valve installation, commissioning and start-up
